

MONITORS

We offer a wide range of monitors, specially selected to offer excellent performance and value for money. Choose from our range of low cost TVs and PC LCD screens which can be used with CCTV systems, or for the very best performance and quality use one of our Xvision High Resolution Professional CCTV Monitor.

Choosing the right CCTV monitor for your application

Monitor Types

CRT - Offer excellent image quality in both B/W and Colour and are the low cost option.

LCD - Offer excellent resolution in a small form factor for better aesthetics and are lightweight and small enough to be used on a desk.

Plasma - The large screen solution which is a massive 42", and designed for use in situations where a large number of cameras are being viewed as a multiscreen view, for long periods of time, such as in a security/control room.

Picture Format

4:3 Format- CCTV cameras transmit their images in this format and this is the best format to use for viewing them.

16:9 Format- This format was developed for non CCTV applications and is becoming popular as TV programmes and DVD Movies are normally broadcast in this format. This format will make the images from CCTV cameras look much wider than they really are, unless you put the screen in 4:3 compatibility mode.

Screen Size

The size of a monitor is determined by the diagonal measurement of the screen i.e. from bottom left to top right.
